## **AFRL Rome awards contract to Integrated Sensors Inc.**

*by Fran Crumb, Information Directorate*

ROME, N.Y. — The Air Force Research Laboratory (AFRL) has awarded a \$740,242 contract to Integrated Sensors Inc. of Utica.

The two-year agreement, "Moving Target Indicator (MTI) Radar Technology," is funded by the laboratory's Sensors Directorate.

"Integrated Sensors engineers will develop a radar system architecture design at a frequency capable of penetrating tree foliage," said John E. Maher, program manager. "The technology focuses on the Foliage Penetration (FOPEN) mission to locate targets otherwise obscured in wooded areas." @
